PROFESSIONAL SUMMARY

Second-year B.Tech Artificial Intelligence and Data Science student with hands-on Machine Learning and Deep Learning projects in Python, Scikit-learn, and TensorFlow/Keras, including CNN-based image classification (99.06% test accuracy on MNIST). Currently building skills in NLP, LLMs, embeddings, and RAG with LangChain. Seeking an AI Engineer internship to apply practical AI skills on real-world problems.

EDUCATION

PA College of Engineering and Technology, Pollachi 2025 – 2029
B.Tech, Artificial Intelligence and Data Science | CGPA: 8.2/10 (current)
Class 12: 75% | Class 10: 85%

TECHNICAL SKILLS

Programming: Python, Object-Oriented Programming, Data Structures and Algorithms
Data & Databases: SQL, Pandas, Matplotlib
Machine Learning: Scikit-learn, Linear/Logistic Regression, KNN, Decision Trees, Random Forest, SVM, Naive Bayes, K-Means, PCA, Gradient Boosting, XGBoost, Feature Engineering, Cross-Validation, Model Evaluation, Regularization
Deep Learning: TensorFlow, Keras, Neural Networks, CNN, RNN, LSTM, Transfer Learning, Transformers, Attention Mechanism
Generative AI / NLP (Learning): NLP and LLM fundamentals, Embeddings, Vector Databases, Semantic Search, Retrieval-Augmented Generation (RAG), LangChain
AI Application Development: Streamlit, OpenCV, YOLO, FastAPI / Flask (basics)
Tools: Git, GitHub, Jupyter Notebook, VS Code, n8n

PROJECTS

MNIST Handwritten Digit Classification *Python, TensorFlow, Keras, CNN*
- Built a CNN (Conv2D, MaxPooling, Flatten, Dense) on 60,000 training and 10,000 test images, achieving ~99.06% test accuracy.
- Normalized pixel values to the 0–1 range and ran predictions on a custom handwritten digit image.

Cat vs Dog Image Classification *Python, TensorFlow, Keras, CNN*
- Trained a CNN on the Microsoft Cats vs Dogs dataset (Hugging Face) with 128×128 resized, normalized images, reaching ~79.1% test accuracy.
- Applied Dropout to improve generalization; evaluated with a confusion matrix and classification report; predicted on new images.

House Price Prediction *Python, Pandas, Scikit-learn*
- Built a Linear Regression model using area, bedrooms, bathrooms, parking, age, and location, with categorical encoding and a train-test split.
- Achieved ~0.997 R^2 on the test set; evaluated with RMSE and R^2.

Customer Churn Prediction *Python, Pandas, Scikit-learn*
- Built a Logistic Regression classifier using age, tenure, monthly charges, support calls, contract, internet service, and payment method.
- Converted churn to binary labels; achieved ~65% test accuracy and evaluated with classification metrics.

HACKATHON / PROJECT EXPO

- Participated in the Quantexa Hackathon.
- Participated in a college Project Expo, presenting an n8n Email Automation project.

LANGUAGES

Tamil, English
